

Relativistic electron events in relation to some atmosphere parameters and ground magnetic variations

M.Yu. Goncharova, V.C. Roldugin (*Polar Geophysical institute, Apatity*)

M.D. Looper (*Aerospace corporation, USA*)

1 year data from low-altitude satellite and from the high-latitude southern hemisphere observatory are compared. It is found some cross correlation between low-energetic electron precipitation events and ground magnetic variation at Vernadsky observatory, as well as with the temperature. Also some features of the solar activity in relation to these events are revealed.
